Assisting Technicians in Real Time for Data Centre Installations

CUSTOMER CHALLENGES

- **Reduce installation time and errors in data centre installations using digital technologies.**

SCOPE

- Use of Microsoft HoloLens Mixed Reality based assistance for server and switch installations in data centre
- Reduce time of installation and ensure first time correct installation.

SOLUTION

- Augmented reality solution for assisting technicians

FEATURES

- Step by step simulation of device and cabling schema instructions that can be used by less trained technicians in data centre
- Mixed Reality cabling view animations to guide technicians
- Support for pushing the projects for technicians on HoloLens through AR360
- Provide routing to navigate to specific location of rack in data centre
